

BAL-O-MAT Bale Breaker

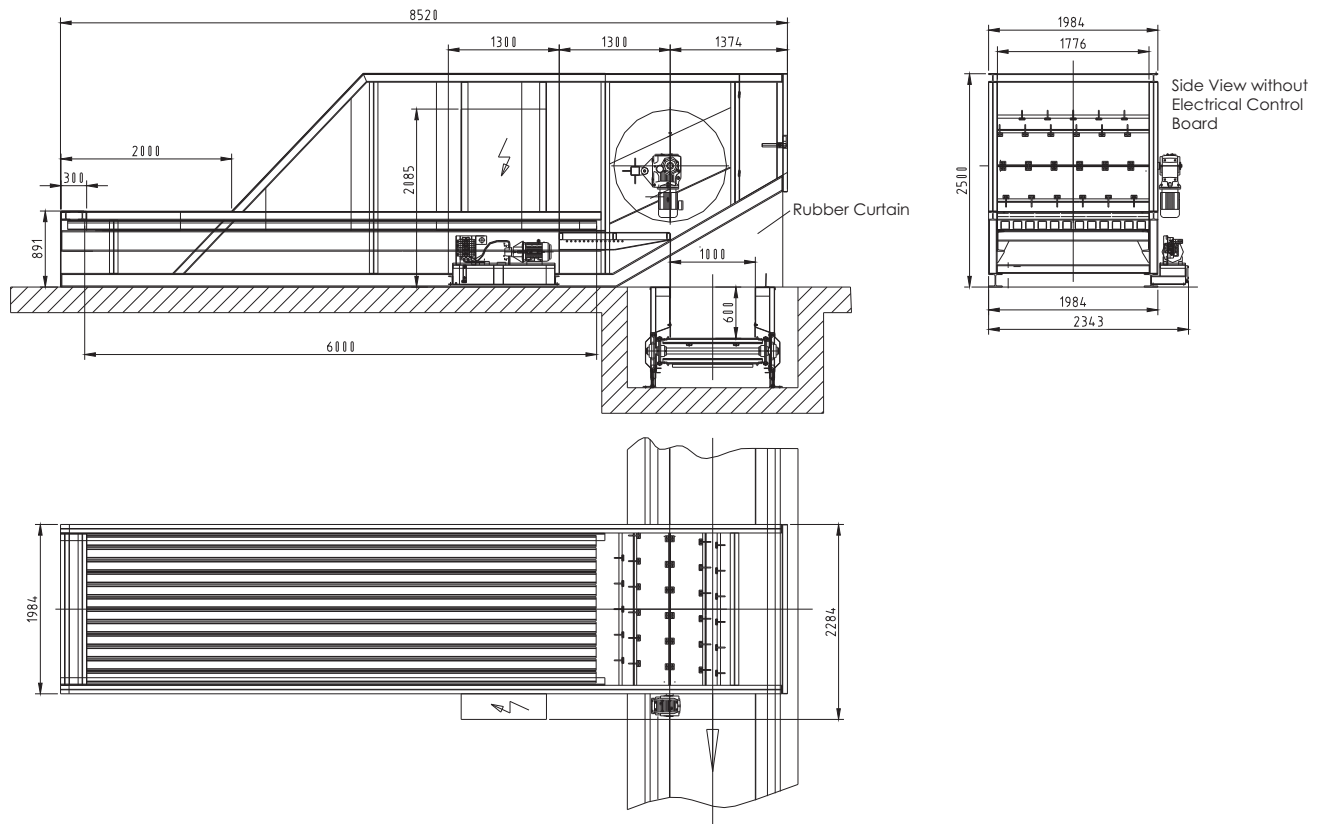

- For PET-bottles, residual waste, plastic containers, waste paper, sorting rests, etc.
- Efficient opening of bales opening and loosening up of material
- Even feed and continuous material discharge
- Infinitely adjustable throughput rate

- Large bale hopper for long feeding intervals
- Ready-for-operation construction with drives and electrical control system
- High mobility and usability on various sites
- Optional with dewiring mechanism

General Drawing

Short Description

The Bale Breaker serves for unraveling of press bales of PET-bottles, waste paper, residual waste, plastic waste and similar materials, as well as the metered material transport downstream working processes. By adjusting the unraveling grade, an optimal subsequent sorting is guaranteed.

The Bale Breaker does not crush but loosen the material for a most effective material sorting. If required, an additional ripping device can be installed for an additional loosening process and opening of tied bundles and cartons.

If the feeding of loose material per front loader and bales is required, the Bale Breaker is also available with a closed hopper with door at the rear side.

Optional with dewiring mechanism.
